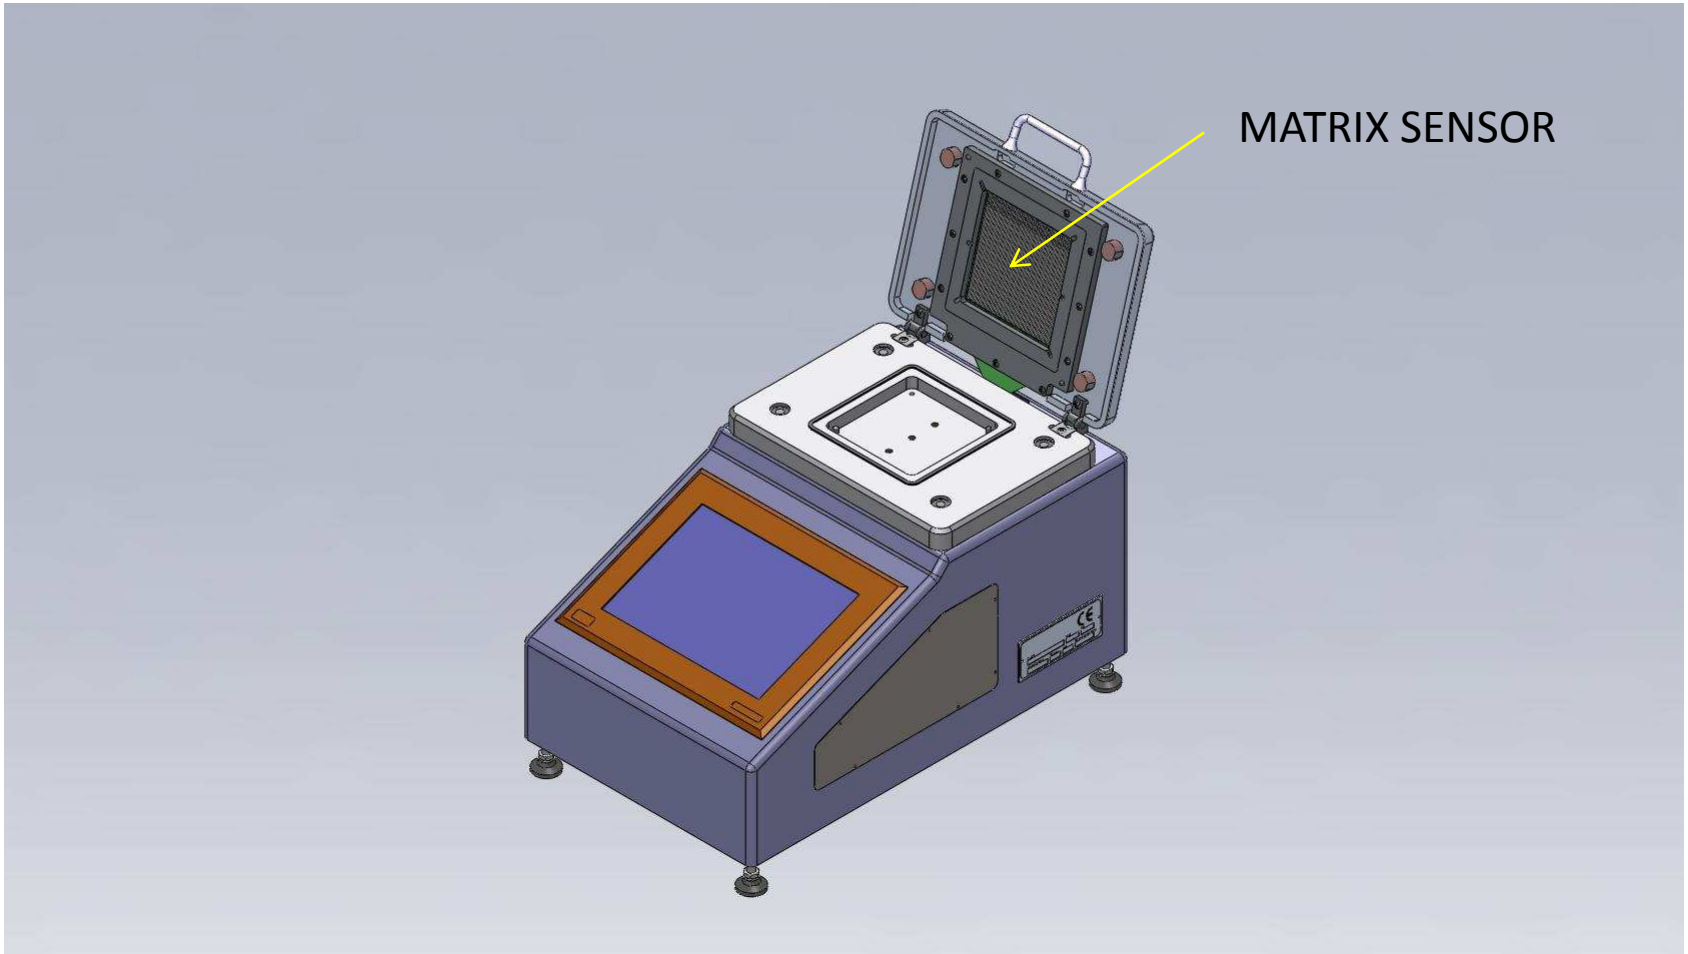
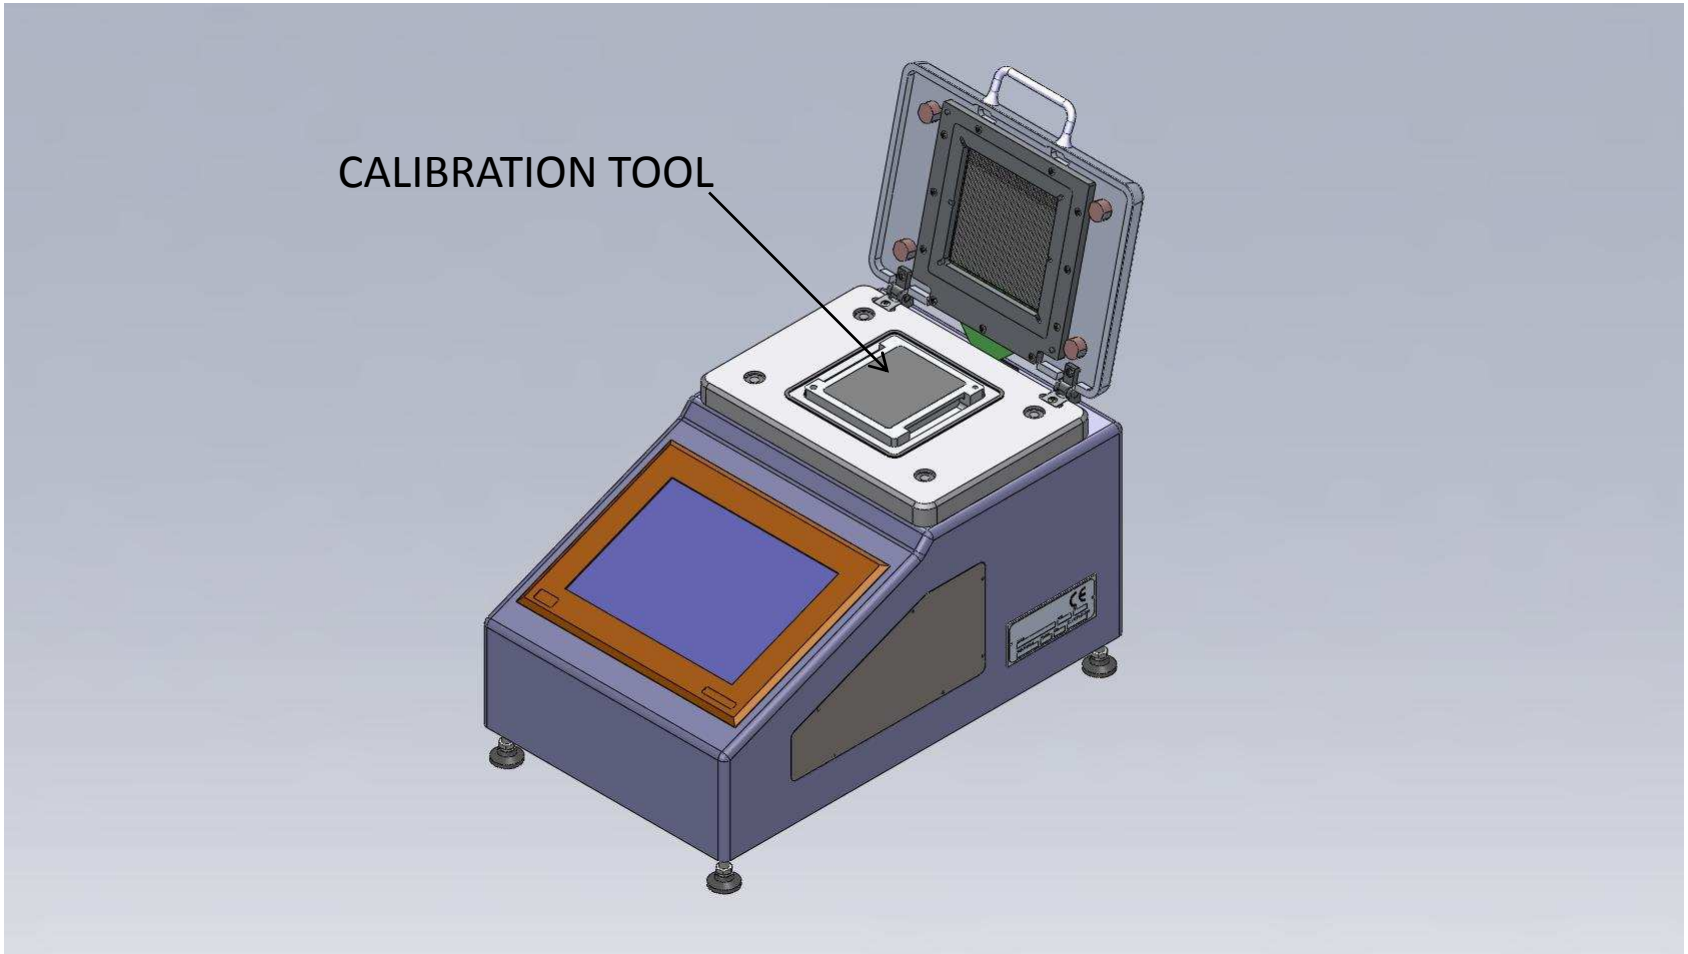
LF-BLI: calibration procedure

1 - Open the cover



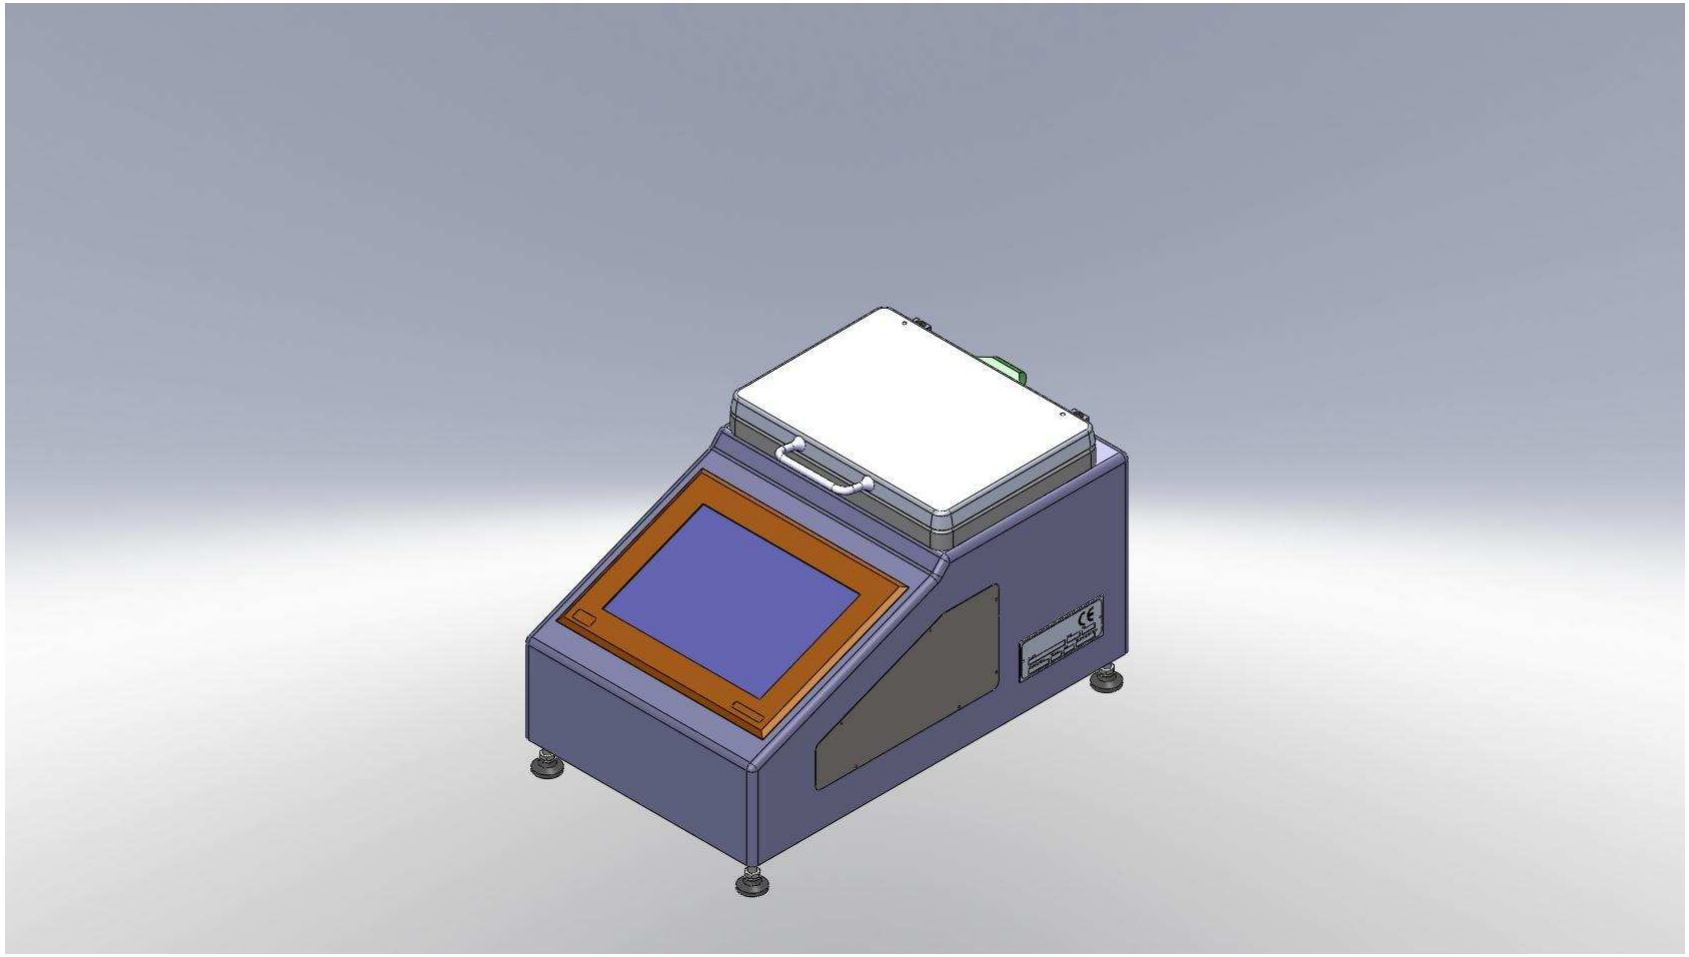
LF-BLI: calibration procedure

2 – Load the calibration tool



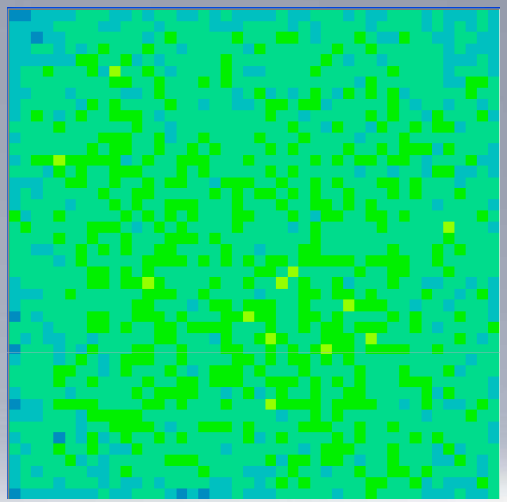
LF-BLI: calibration procedure

3 – Close the cover and perform *Calibration Cycle*



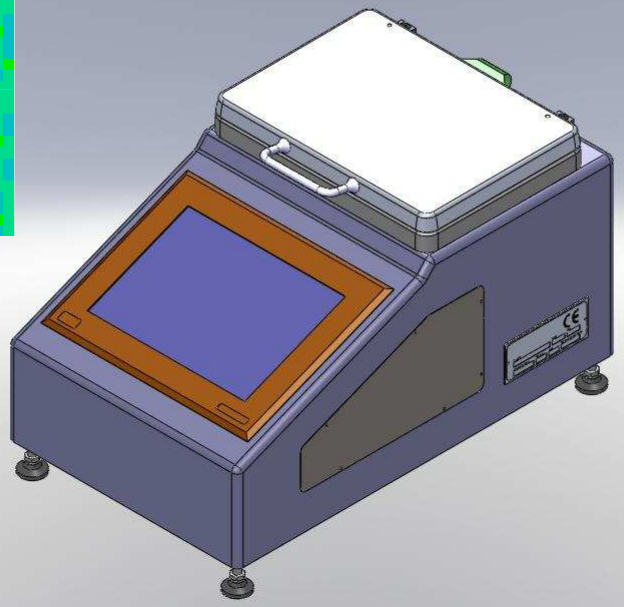
LF-BLI: calibration procedure

4 – Sw calculates the average of the matrix sensor



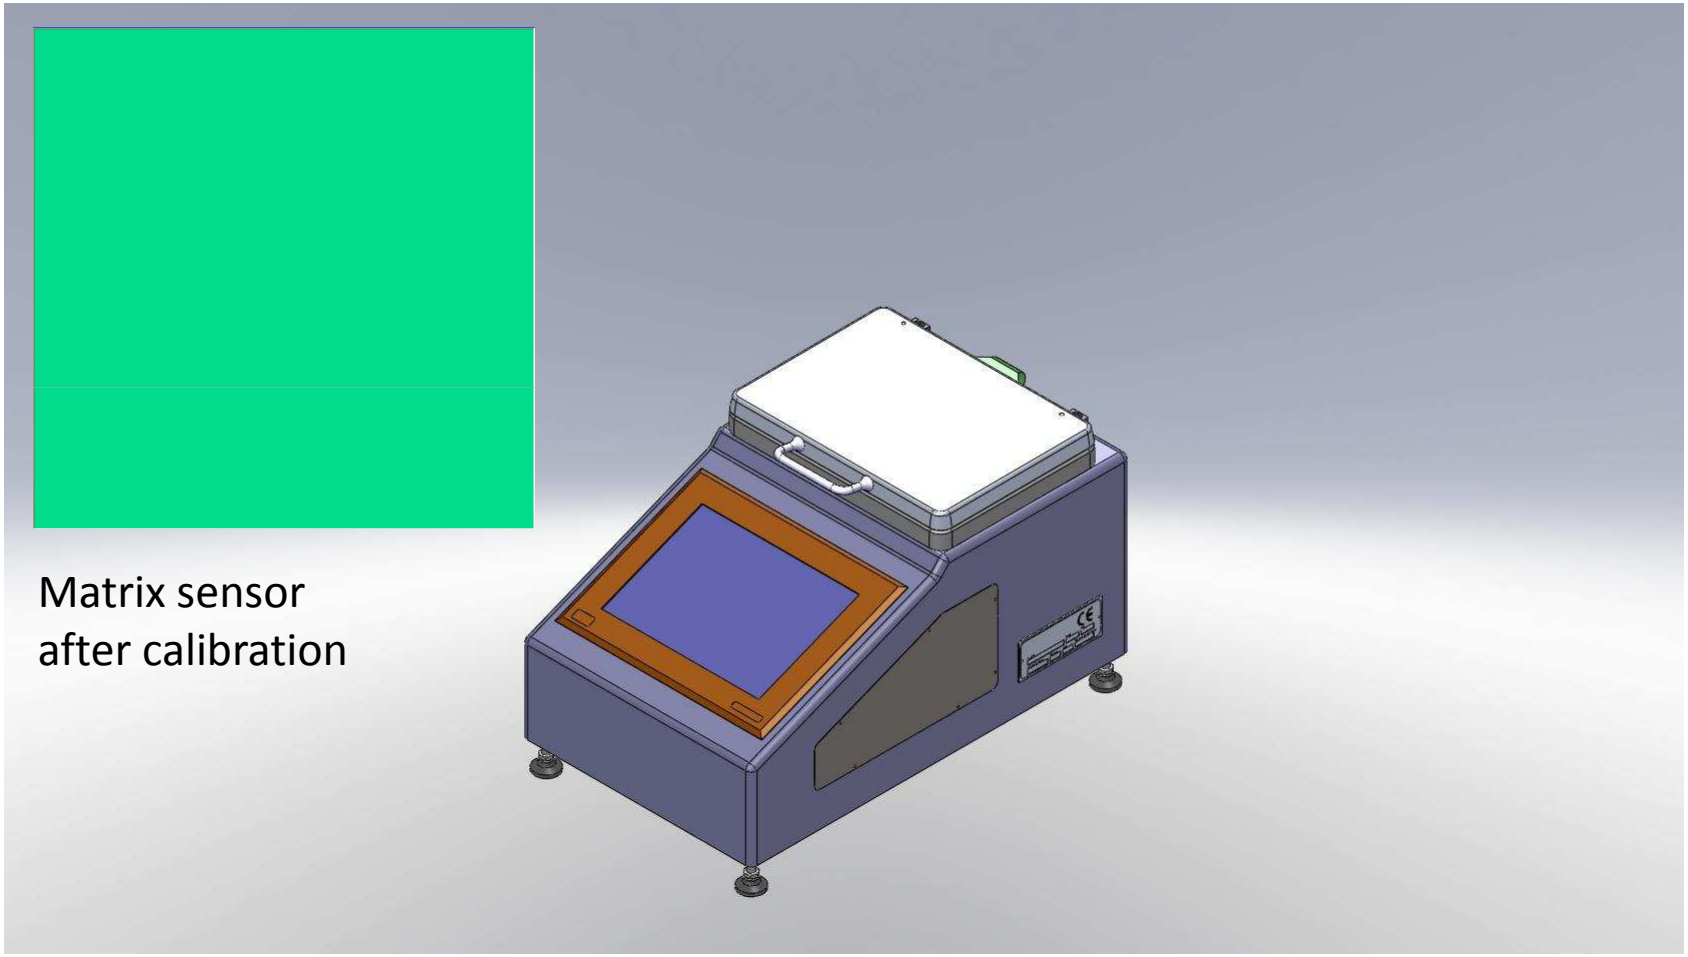
Matrix sensor
before calibration

The sw evaluates a
Gain Matrix (G)



LF-BLI: calibration procedure

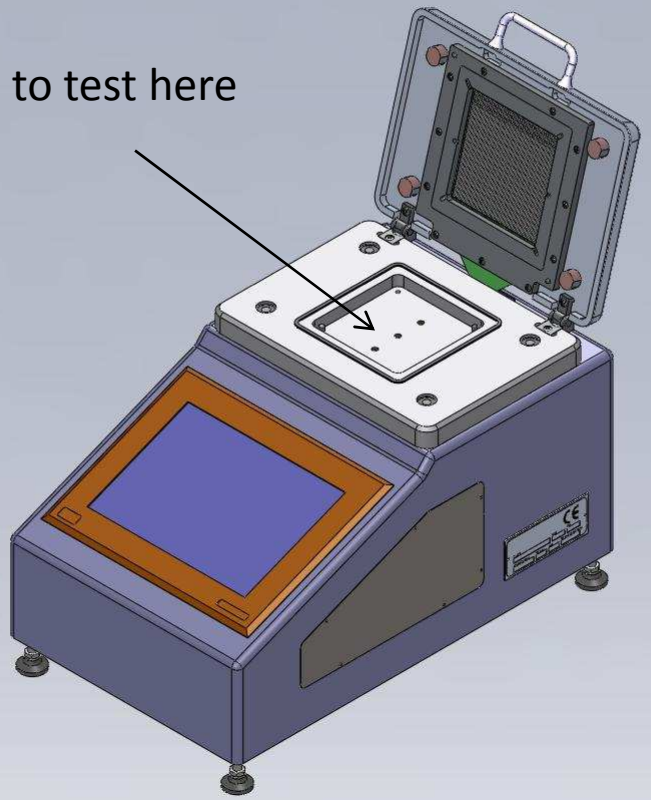
5 – Sw applies the the calibration matrix G



LF-BLI: calibration procedure

6 – Take away the calibration tool and start tests

Place the blister to test here



The data are filtered via the G matrix to equalize the sensor answer
